

Hub Jeweller

Security system control panel.
Has two independent
communication channels:
Ethernet and a 2G SIM card.

Find the detailed information on the device at the link:

ajax.systems/support/devices/hub/

2
GRADE
EN 50131

PD 6662
2017

Key features

Free software updates

Connection to security company CMS

Tampering alarm

Remote control and setup via the app

Informing users with push
notifications, calls, and SMS

Communication with wireless Ajax
devices at a distance of up to 2,000 m

Frequency hopping

Connecting to Ajax apps via QR code

Always online

To guarantee prompt alarm transmission to the monitoring station and users, Hub can be connected to two Internet providers at a time via **Ethernet** and **SIM card (2G)**. Channels work in parallel, and automatic switching between them takes seconds.

Hub is connected to the apps, security companies and users through the Ajax Cloud server with an availability of 99.995% in 2021. For more excellent reliability, the servers are located in several data centres. We use the proprietary binary protocol and automatic load balancing for the uninterrupted processing of millions of data packets and the stable operation of security systems.

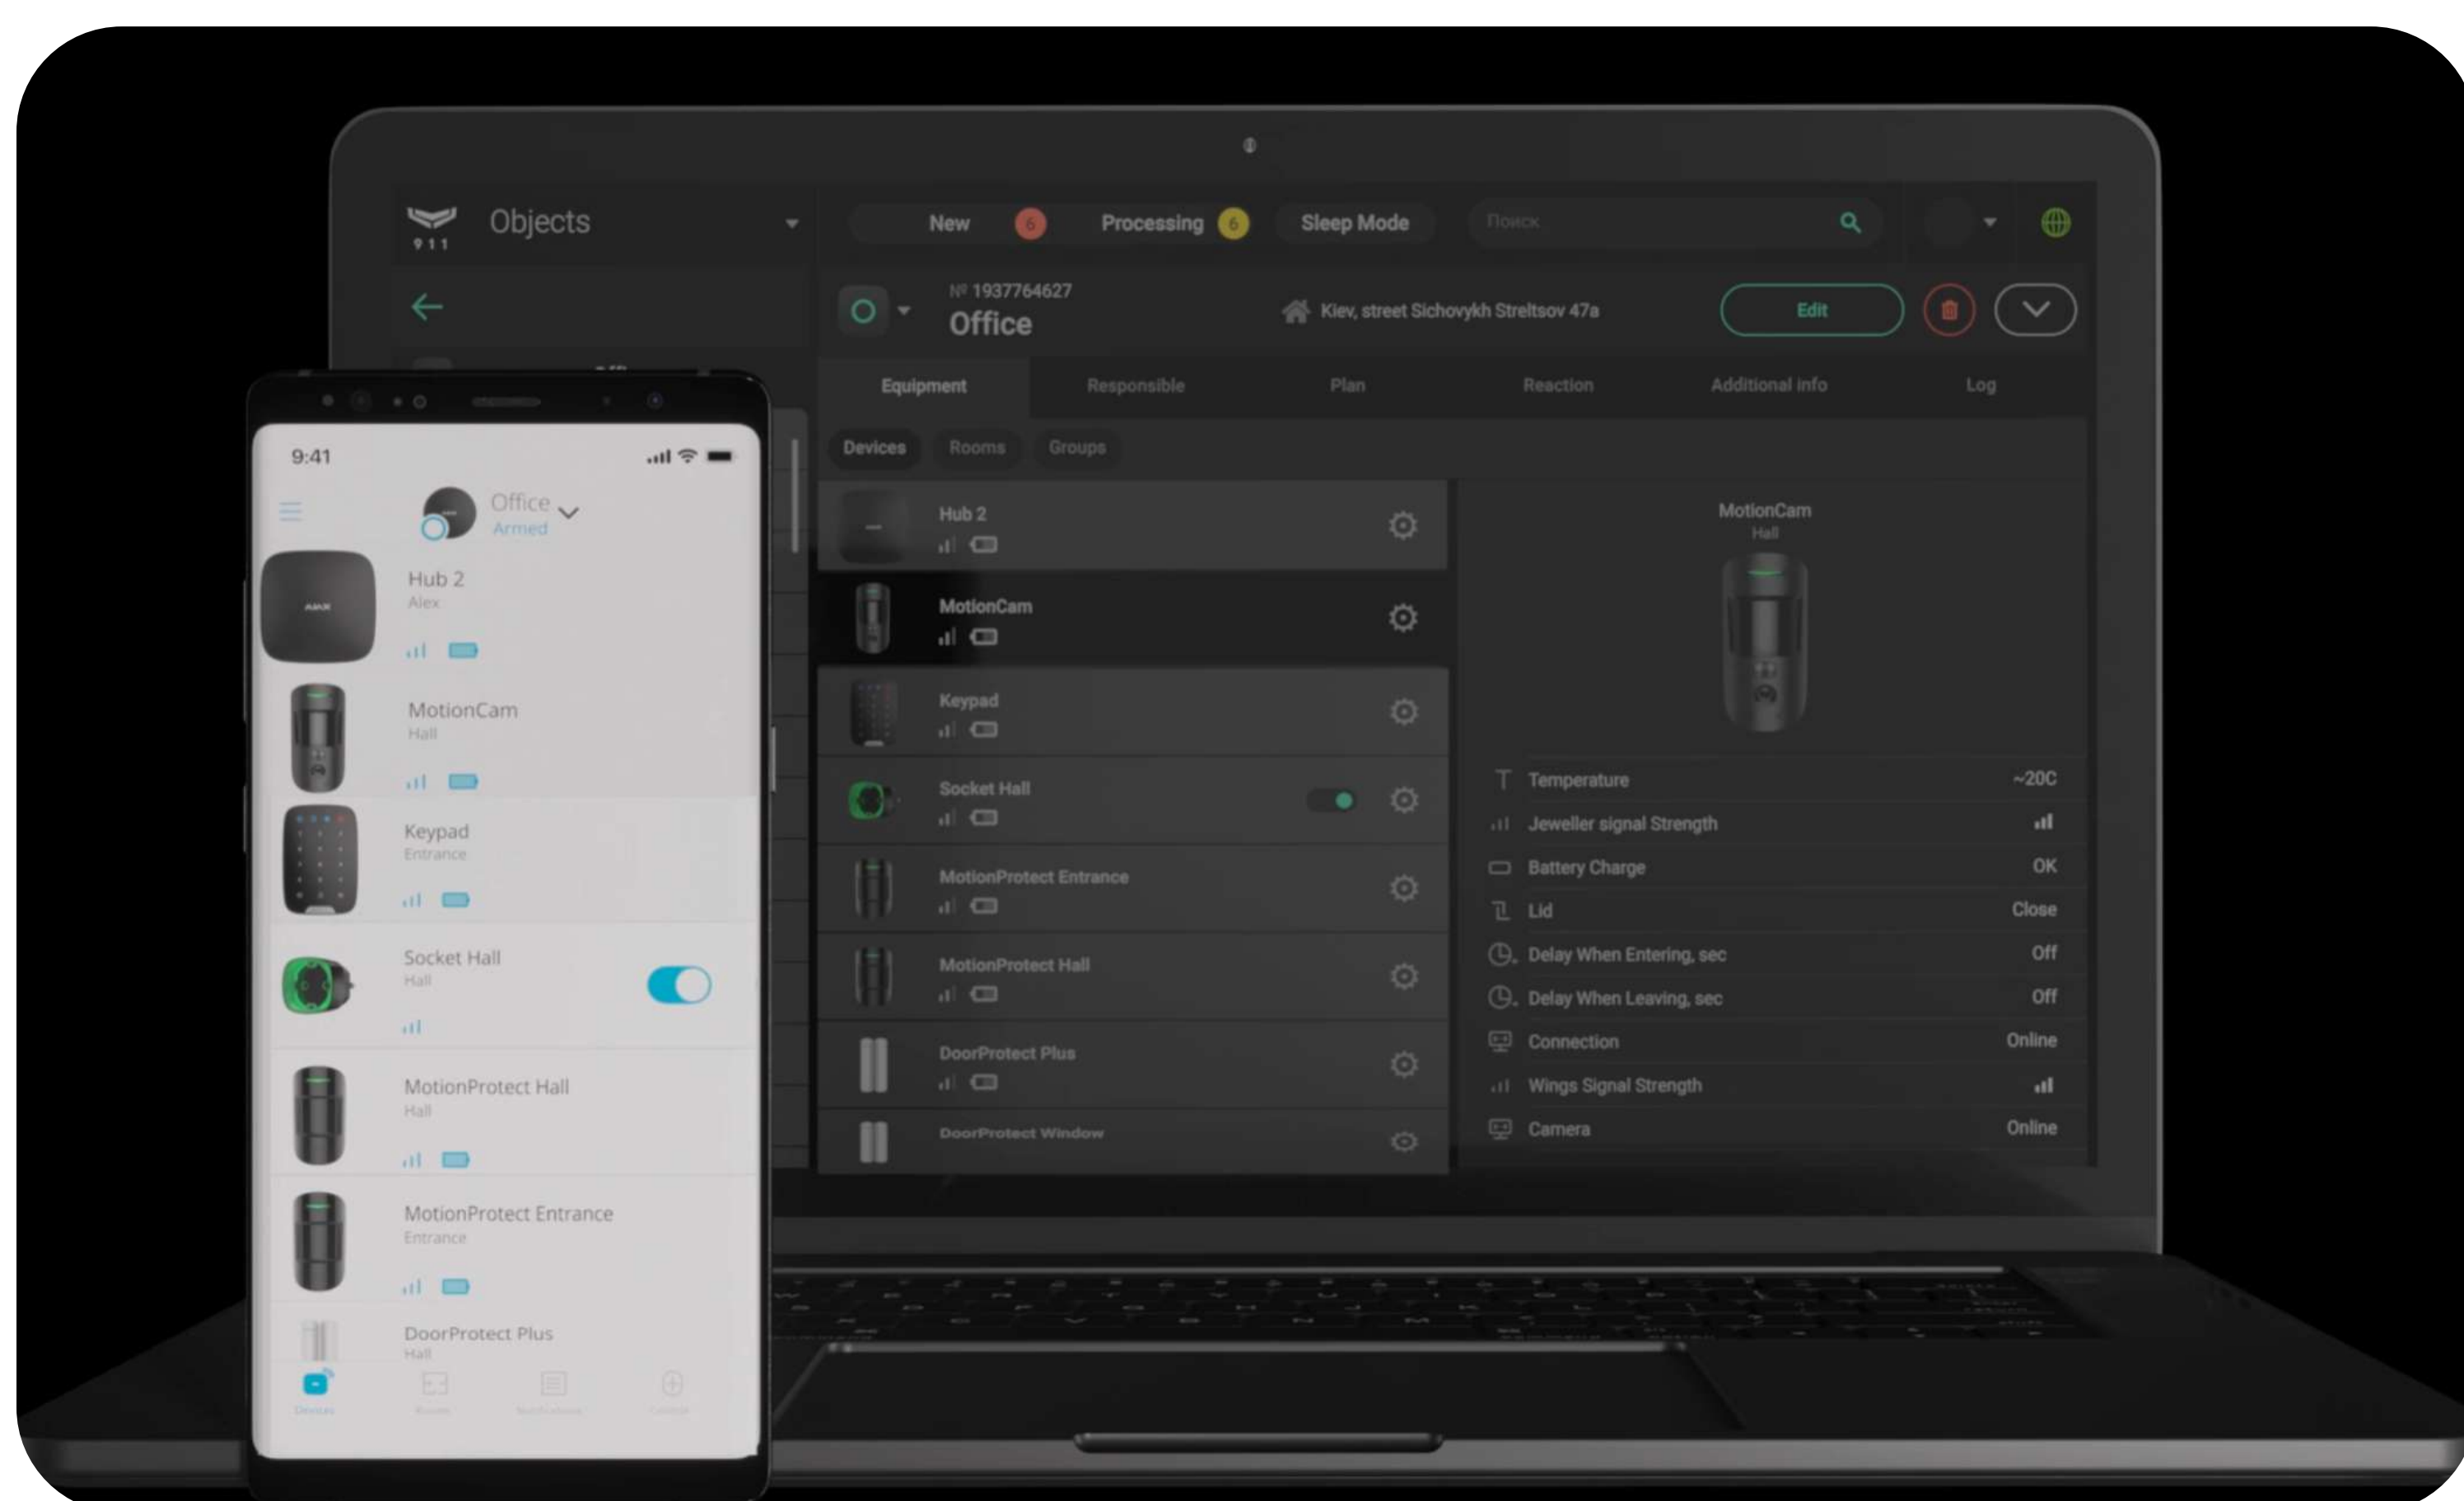

Hub reduces the security system dependence on the conditions at the facility. The control panel is equipped with a backup battery, providing **up to 16 hours of autonomous operation** in case of a blackout. The system will report a power-down and a power restoration to the CMS and all users.

Jeweller radio protocol provides two-way communication between a hub and devices at a distance of **up to 2,000 m**. Jeweller uses time frames to synchronize communication with connected devices, authentication to eliminate forgery, and encryption to protect against data theft.

To expand the radio coverage area, a **range extender** can be connected to Hub, increasing the range **to 1,800 m** more.

Controlled with apps

We've developed two types of applications: for users and PRO. Users' apps are designed for monitoring alarms and managing security via smartphone. Apps for PRO are designed to manage system settings via PC or smartphone.

All types of Ajax apps connect to a hub using a secure channel with Ajax Cloud — our server solution located at several AWS data centres. All security system settings are always available in the app.

The keyboard also allows you to create passcodes for those who are not added to the hub users or use the system from time to time. In this case, the users and the monitoring company operator also know exactly who and when changed the security mode. It is convenient, for example, to create a passcode for a cleaning company.

Fast connection and installation

Hub is ready to work right out of the box. It comes with pre-installed communication modules, a power supply unit, and a backup battery. To begin the system setup, an installer needs to plug the device into a power socket, connect it to the Internet, insert a SIM card, and scan the app's QR code. Thanks to SmartBracket, installers don't need to disassemble the enclosure to mount the hub.

Technical specifications

Compliance with standards	EN 50131 (Grade 2) PD 6662:2017	Connection to CMS	SurGard (Contact ID) SIA (DC-09) ADEMCO 685 Other proprietary protocols

MotionProtect Jeweller

Wireless indoor IR motion detector.

An Ajax hub is required for operation. Find the detailed information on the device by the link:

<http://ajax.systems/support/devices/motionprotect/>

2
GRADE
EN 50131

PD 6662
2017

Key features

Up to 12 m detection distance

88.5°/80° viewing angles

Pet immunity

Temperature compensation

False alarms prevention algorithm

Effortless installation and replacement

Remote control and setup via the app

Connecting via QR code

Angles and range

False alarm prevention

MotionProtect Jeweller combines special optics and software to filter false alarms. When professionally installed, the detector ignores pets and doesn't react to the most common sources of false alarms.

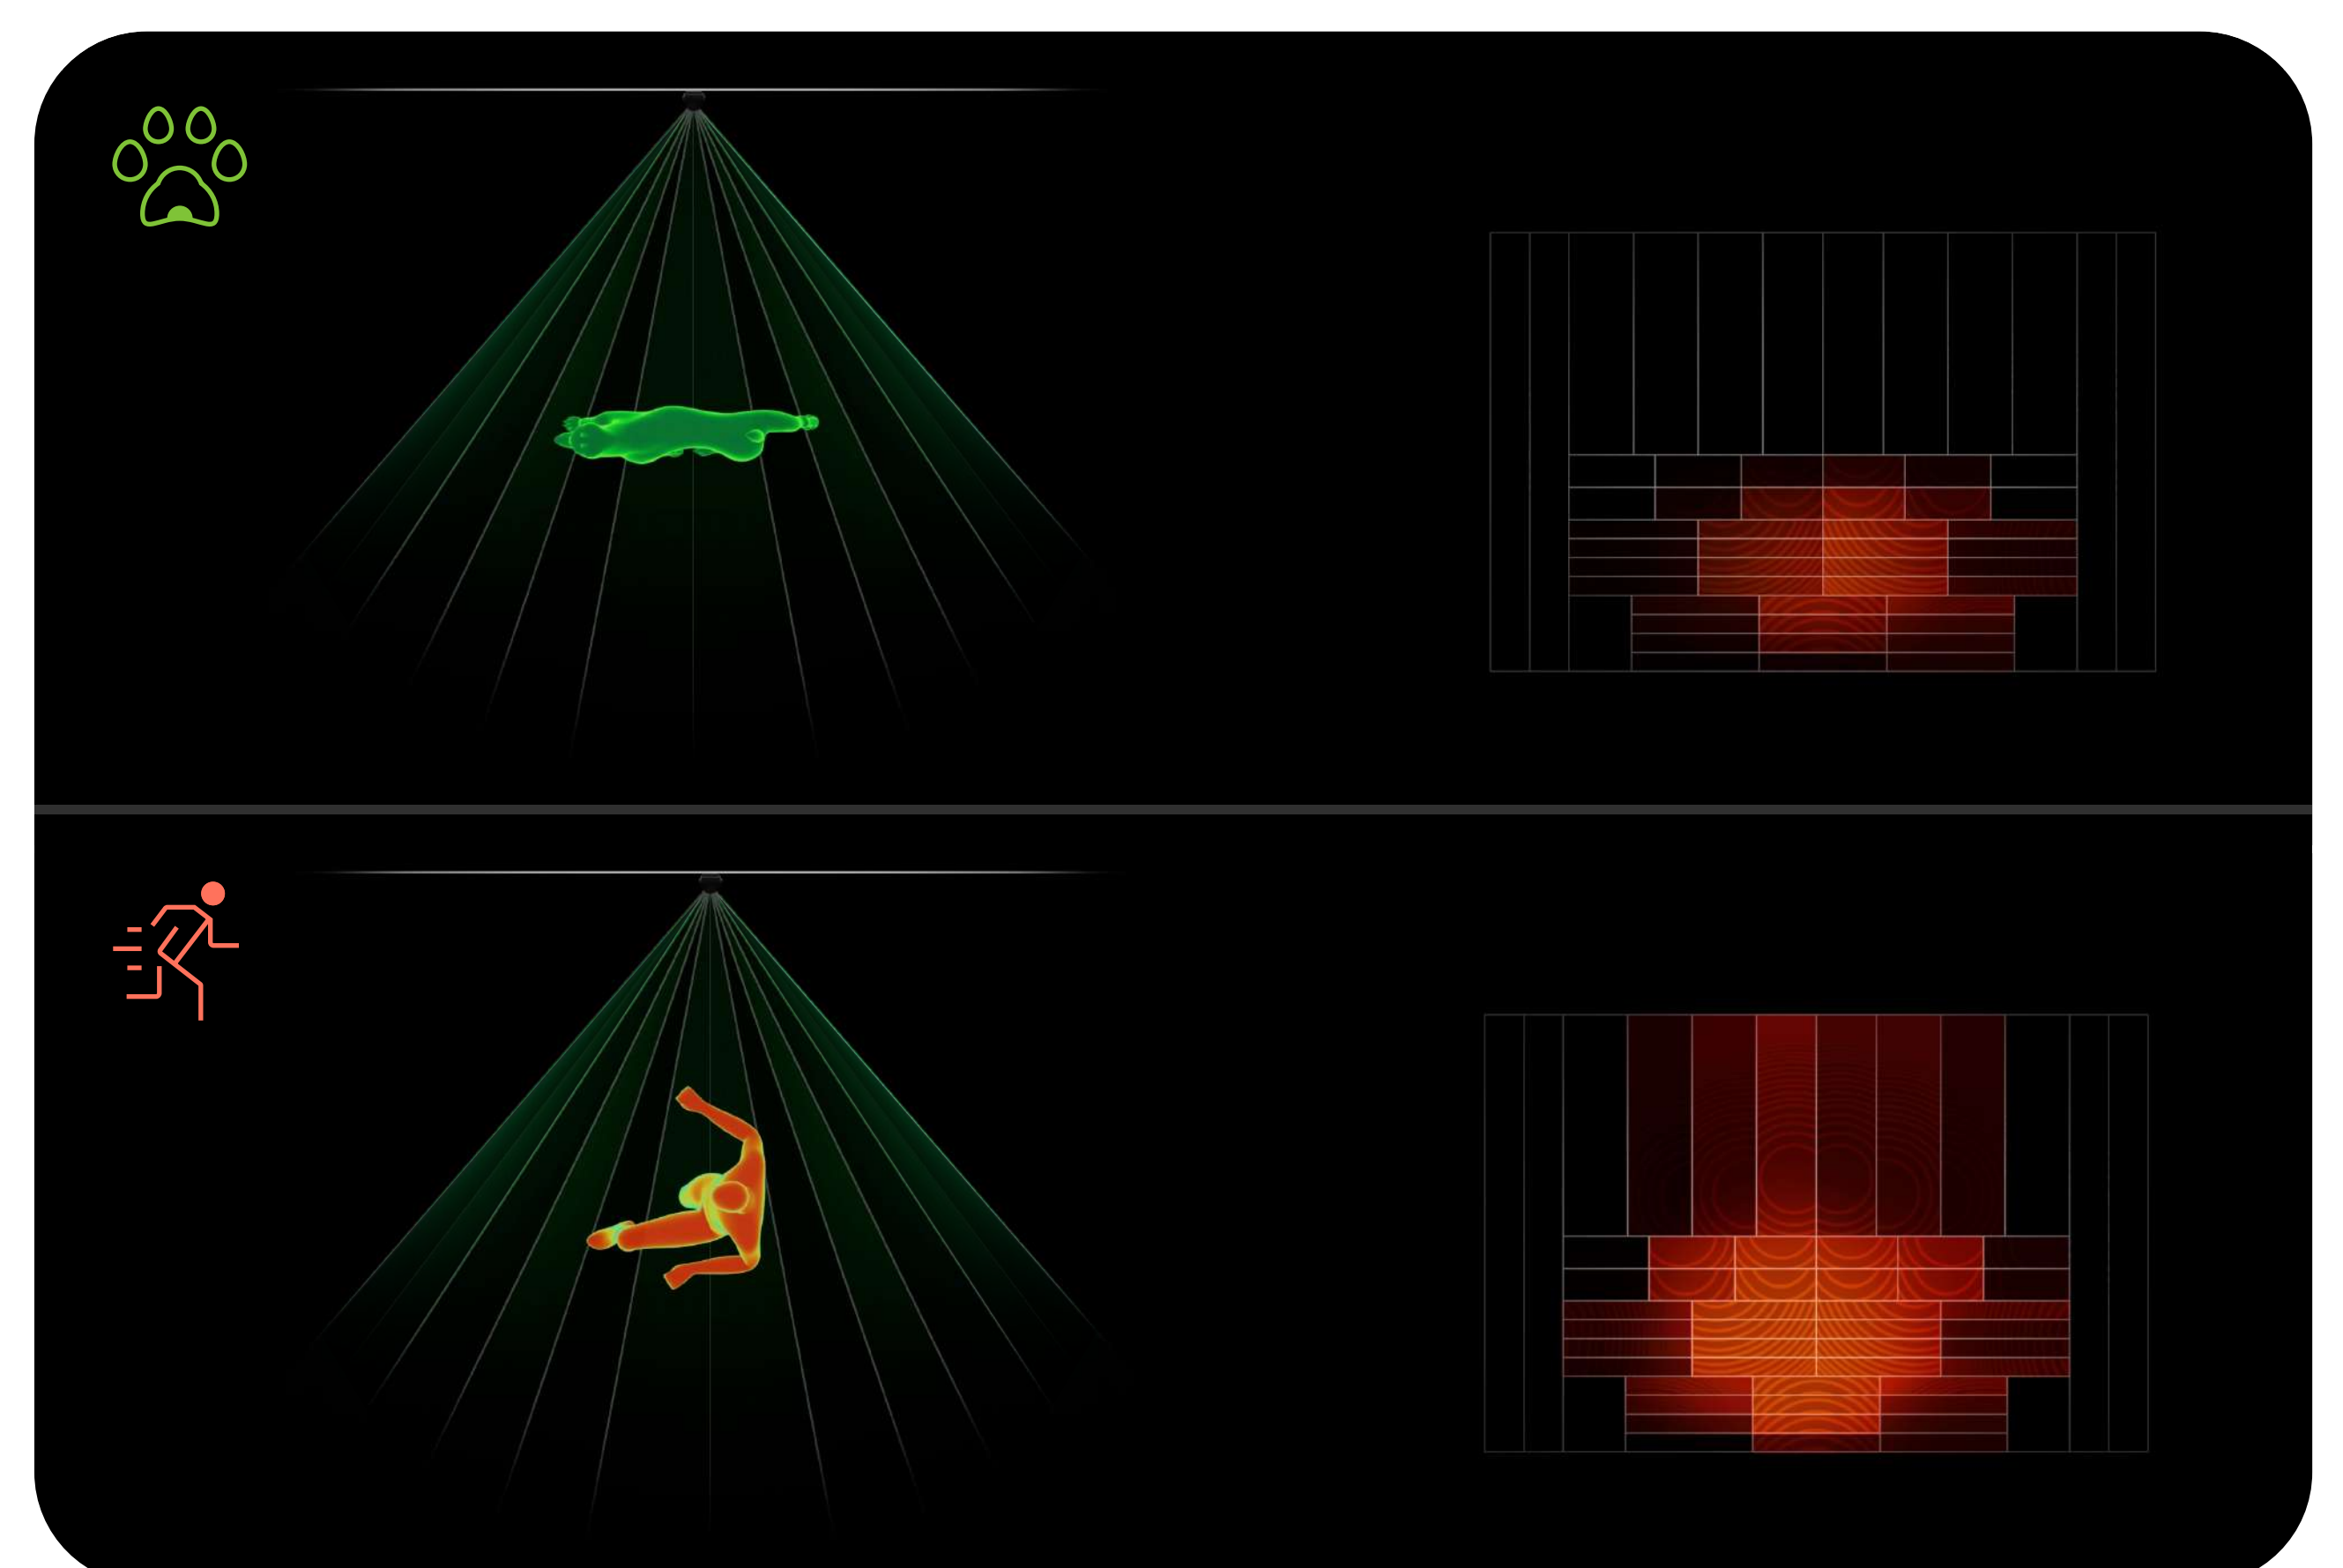

Optics

The detector lens increases sensitivity to human motion, cutting off false alarms to other sources of IR radiation. It is designed so that potential IR radiation from pets and other interferences affect only the small lens sections. Large sections, on the contrary, are aimed at the most likely places of burglar motion.

Software

For additional protection against false alarms, the detector uses the SmartDetect algorithm. The armed detector constantly analyses the thermal diagram from the PIR sensor: the intensity of IR radiation, the size of the thermal spots, the speed of movement and other parameters.

Installation

When properly installed and configured, the detector does not react to common sources of false alarms and pets under 50 cm tall and 20 kg in weight. For seamless installation, it has pre-installed batteries and the SmartBracket mounting panel. So, installers don't need to disassemble the detector and won't damage the electronics during installation.

Jeweller

communication technology

Jeweller is a **two-way wireless protocol** that provides fast and reliable communication between hubs and devices. The protocol delivers instant data-rich alarms: security companies and users know which device was triggered, when and where it happened.

Jeweller features **encryption** and **authentication** to prevent forgery, and **polling** to display devices' status in real time. Supporting **up to 1,700 m** of wireless connectivity, Jeweller is ready to protect facilities and deliver **the best user experience** for both end users and installers.

Up to 5 years of operation on pre-installed battery

Up to 1,700 m of two-way encrypted wireless communication between hub and detector

SpaceControl Jeweller

Key fob for controlling the security system.

An Ajax hub is required for operation.
Find the detailed information on the
device at the link:

ajax.systems/support/devices/spacecontrol/

Key features

Build-in panic button in case of emergency

Indication of command execution by LED

Remote control and setup via the app

Double or long press against accidental activation

Connecting via QR code

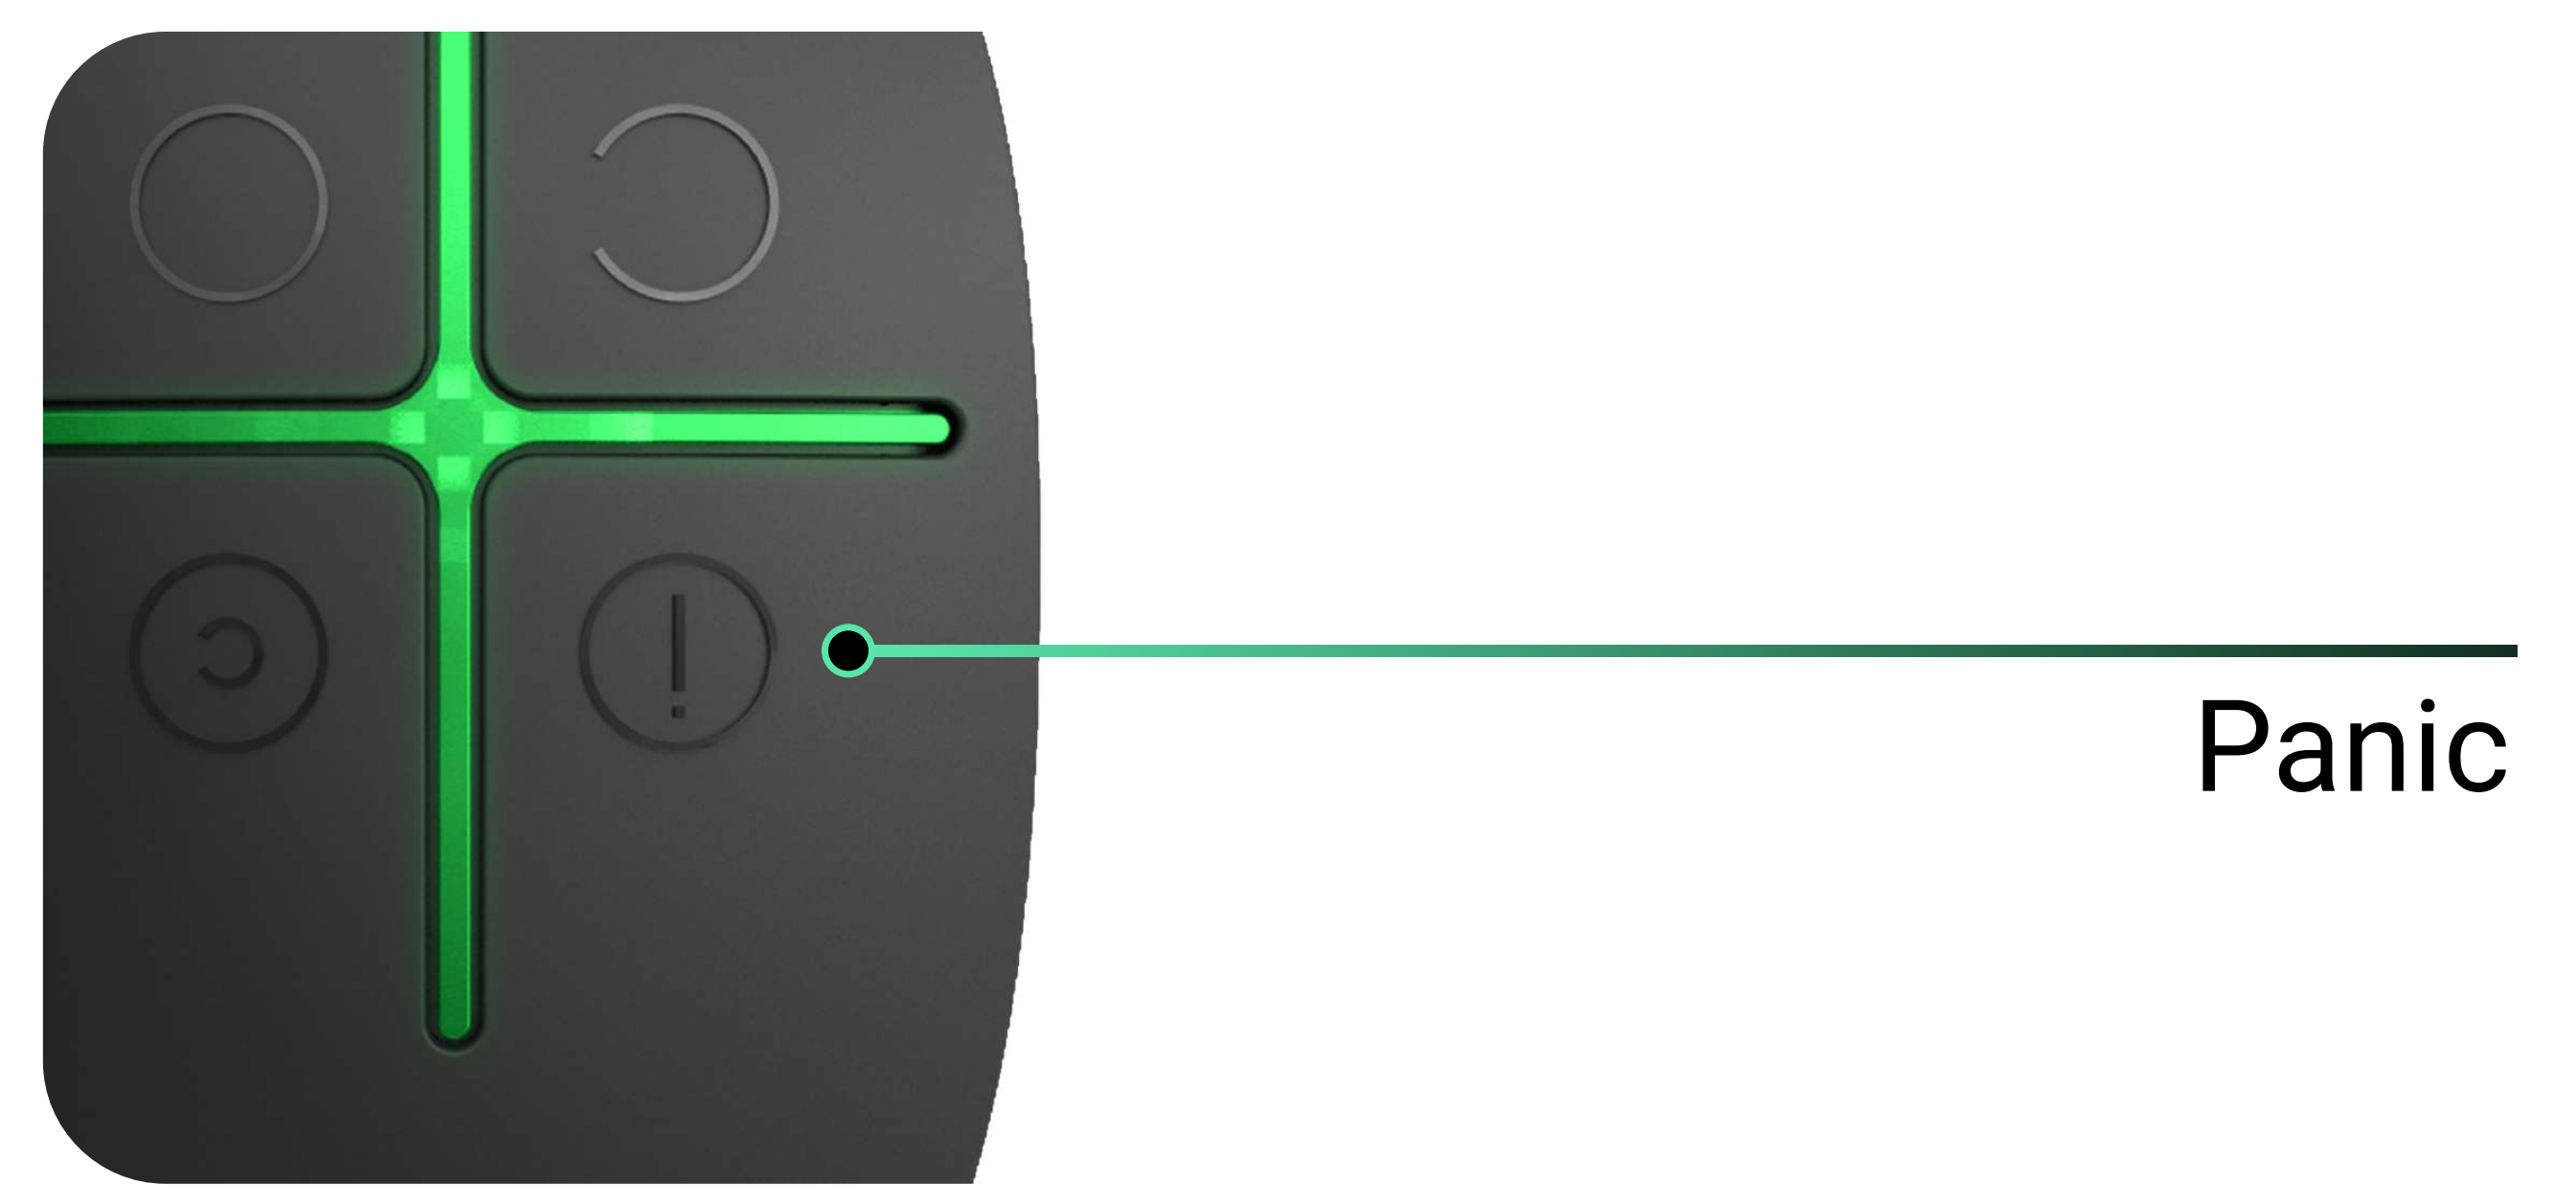

Security modes control

With SpaceControl, users can arm, disarm and activate the **Night mode** for the entire system. The key fob can also be configured to manage a separate security group.

The device can be assigned to a user. In this case, SpaceControl will have the same security modes management rights as the user.

Panic button

In case of an emergency, the user can press the built-in panic button and notify the security company monitoring station (CMS) and users about the dangerous situation. This ensures a fast and accurate response to the threat.

Protection against accidental pressing

In the Ajax app, a long or double press can be configured to exclude accidental activation of SpaceControl buttons while carrying it in a pocket or bag. Users do not need to worry about false panic alarms or incidental disarming.

 **Jeweller**
communication technology

Jeweller is a radio protocol for fast and reliable two-way communication between hub (or range extender) and connected devices. The protocol provides a wireless radio communication range with SpaceControl **up to 1300 meters**. This communication range allows using the Ajax security system even on large-scale objects.

Jeweller is responsible for transmitting alarms and commands. Thanks to Jeweller, users and the monitoring station can always see the current status of SpaceControl and the security mode of the system in Ajax apps.

Quick pairing with the system

The device connects to the Ajax security system in less than a minute. An installer needs to open the Ajax app, scan the QR code, add the device to the room and assign it to the user or a security group if needed. The key fob is configured remotely: the installer does not need to visit the facility to change key fob settings.

No need to disassemble the enclosure: replaceable batteries are pre-installed. With a special handler, SpaceControl can easily be attached to a key ring and carried around with the set of keys in a bag or a pocket.

StreetSiren Jeweller

Wireless siren with LED frame.

An Ajax hub is required for operation.
Find the detailed information on the device at the link:

ajax.systems/support/devices/streetsiren/

Key features

Adjustable volume: from 85 dB to 113 dB

Delay and security mode
changing indication

IP54 protection class

Remote control and setup via the app

Adjustable alarm duration:
from 3 s to 3 min

Door opening notifications

Effortless installation and replacement

Connecting via QR code

Operating principle

Informs about alarms

The siren responds to tamper and security system alarms in less than a second. It is loud enough to scare away intruders and attract the attention of neighbours.

Serves as a security status indicator

The siren LED notifies that the facility is armed, and a sound signal indicates **Delay When Entering / Leaving**. These are helpful features for the users who control the security system with a keypad or key fob.
